- [3 Detailed configurationvariables](#)

This is how you configure the [automessages](#) plugin.

1 Short description

With this plugin, you can configure your own messages, which are sent to the chat in a specific interval. Furthermore messages can be shown at specific times/days.

2 Configurationoverview

JavaScript: configs/plugins/automessages.json

```
{
```

```
server:running^4GSManager<VERSION>^5,visitWebsite^4www.GSManager.de",  
T_MAP^4<NEXT_GAMETYPE>^5) "  
],
```

```
[ "0      0      *      *      *",
```

```
] }  
}
```

3 Detailed configurationvariables

The configurationfile of the "[automessages](#)" function is located in the configs/plugins directory and is named banner.json. An explanation of the variables follows:

Variable	Allowed Values	Description
----------	----------------	-------------

enabled	truefalse	You can (de)active the plugin with this variable.
---------	-----------	---

interval	number	This variable defines the interval between two sent messages in seconds.
----------	--------	--

logging	truefalse	This variable defines if the automessages should be logged in the daemon.log
---------	-----------	--

messages	Text	This variable defines the messages, which should be send to the chat.
----------	------	---

cron	Array with arrays of two strings each	First entry of each array is a unix cron time string , second is the message.
------	---------------------------------------	---

You can use the following placeholders in your messages:

Platzhalter	Beschreibung
{{br}}	Will be replaced with a wordwrap.
<NEXTMAP>	Will be replaced with the next map.
<NEXTGT>	Will be replaced with the next gametype.
<VERSION>	Will be replaced with the current running GSManager
<TIME_DE>	Will be replaced with the time in german time format.
<TIME_EN>	Will be replaced with the time in english time format.
<DATE>	Will be replaced with the date in form date time month year (01 Oct 2014).
<MAP>	Will be replaced with the current running map.

Using color codes is possible.
