Installing PHP [Windows]

Inhaltsverzeichnis

- 1 Downloading PHP
- 2 Unpacking PHP
- 3 Modify the INI File

This will show you how to install PHP on Windows.

1 Downloading PHP

First you must download the newest `non Thread Safe` version ffrom the PHP Website. When this entry was written, this was the newest version

2 Unpacking PHP

Unpack the downloaded .zip file to a chosen folder, for example C:/PHP

3 Modify the INI File

Next you must to enter your PHP folder and rename your `php.ini-production` to `php.ini`. You must open this file with your text editor and replace some rows by using the following table:

line number(*)	search for	replace with
466	display_errors = Off	display_errors = On
736	; extension_dir = "ext"	extension_dir = "ext"
888	; extension=php_mbstring.dll	extension=php_mbstring.dll
895	; extension=php_pdo_mysql.dll	extension=php_pdo_mysql.dll
899	; extension=php_pdo_sqlite.dll	extension=php_pdo_sqlite.dll

(*) The line number can differ, which depends on the used version. The used line numbers in the table above are from the PHP-version 5.6.12 x86.
